Lab 3-Part 1

Part 1: Document Template

The Source Code

```
interface DocumentTemplate extends Cloneable {
    DocumentTemplate clone();
    void setTitle(String t);
    String getTitle();
}

class ArticleTemplate implements DocumentTemplate {
    private String title, layout, style, content;

    public ArticleTemplate(String title, String layout, String style, String content)
    {
        this.title = title; this.layout = layout; this.style = style; this.content =
content;
    }

    private ArticleTemplate(ArticleTemplate other) {
        this(other.title, other.layout, other.style, other.content);
    }

    @Override public ArticleTemplate clone() { return new ArticleTemplate(this); }
    @Override public void setTitle(String t) { this.title = t; }
    @Override public String getTitle() { return title; }

    @Override public String toString() {
        return "Article{title=" + title + ", layout=" + layout + ", style=" + style +
"";
    }
}

public class PublishingDemo {
    public static void main(String[] args) {
        ArticleTemplate base = new ArticleTemplate("Tech Trends", "two-column",
"modern", "body...");

        ArticleTemplate a1 = base.clone();
        a1.setTitle("Healthy Eating Habits");

        ArticleTemplate a2 = base.clone();
        a2.setTitle("The Future of Space Travel");

        System.out.println(a1);
    }
}
```

```

        System.out.println(a2);
    }
}

```

The Class Diagram

The Output

```

Article{title=Healthy Eating Habits, layout=two-column, style=modern}
Article{title=The Future of Space Travel, layout=two-column, style=modern}

```
